## Press Release

TMD microwave power modules on show at AOC exhibition

TMD Technologies will be exhibiting at the AOC international symposium and convention in Atlanta, GA, in October this year. The five day event is a long-established specialist gathering for the international electronic warfare community.

TMD designs and manufactures a wide range of pulse, CW and ICW amplifiers for naval and airborne electronic countermeasures (ECM), and has a worldwide reputation for technical performance and product reliability, particularly at high frequencies and powers. The company also has many years' experience in high voltage power supplies (HVPSUs) for towed decoy applications.

The UK company will be highlighting its power supplies and microwave power modules (MPMs), including the PTX8207, which provides an enhanced power output of up to 140 W across a wide frequency range of 4.5-18.0 GHz.

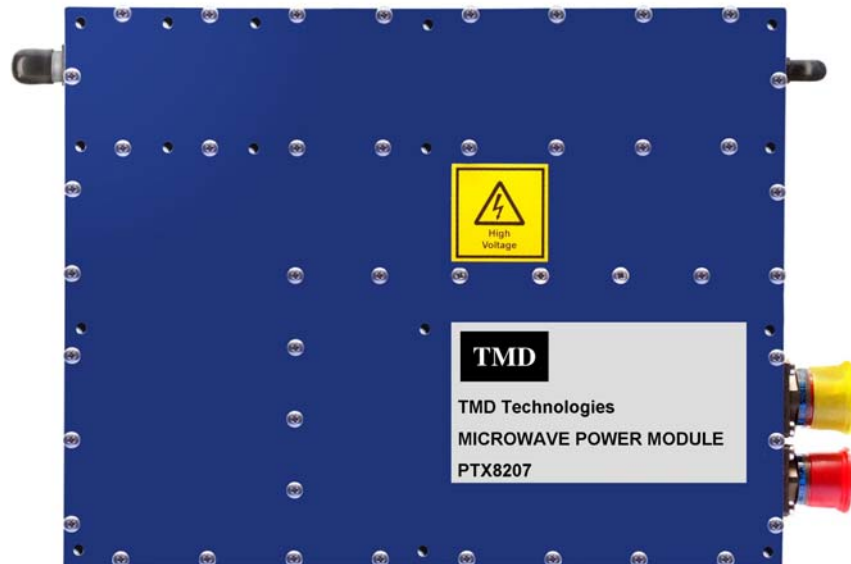

TMD's comprehensive range of compact, lightweight MPMs are ideally suited for airborne ECM applications and can be customised to specific power and frequency requirements.

The 47th Annual AOC International Symposium and Convention takes place on 3-7 October 2010 in Atlanta, GA, USA, and TMD will be exhibiting on Stand 301. Further information on the event can be found at [www.crows.org](http://www.crows.org).

Notes for editors

TMD Technologies is one of the world's leading designers and manufacturers of specialised transmitters for radar and electronic warfare applications, high voltage power supplies and microwave tubes. The multiple Queen's Award winning company also produces a range of advanced commercial microwave amplifiers for EMC testing and scientific applications.
